# EAST ARNHEM

## Health Profile

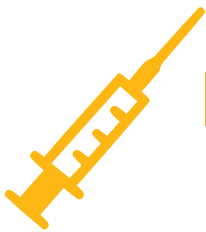

### ABORIGINAL AND TORRES STRAIT ISLANDER HEALTH

Aboriginal and Torres Strait Islander peoples are a significant and respected proportion of the NT population.

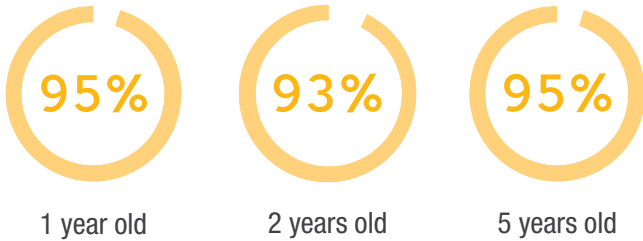

This is the oldest living culture in the world, and the connections to country, language and culture are a source of strength in modern Aboriginal communities. This population also tends to experience very high levels of disadvantage, particularly in more remote locations. This is reflected in poor health statistics, including high rates of chronic disease, infectious disease and premature mortality.

The estimated gap in life expectancy between Aboriginal and non-Aboriginal Australians in the NT is 14.4 years.
